**DETAILED ACTION**

The following is an examiner's statement of reasons for allowance: Independent claims 77, 84, 85, and 91 recite a method for quantifying nerve and neural-muscular integrity related to pelvic floor functions comprising the steps of providing a probe which consists of a probe body, a distensible member (or the structure of "plurality of wings" as recited in claims 85 and 91), and a recording electrode, placing the probe into the anal canal or vagina, moving the distal end of the distensible member away from the probe body to engage tissue with the recording electrode, and detecting resulting activity in the pelvic area via the recording electrode. The prior art does not teach the combination of the steps of providing the structure of the probe (i.e. the movable distensible member or "plurality of wings" and the recording electrode), the step of placing, moving, stimulating and recording as recited. Accordingly Applicant's amendments to the claims have defined the present invention over that of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
